Safety instructions for using a plastic case
During the installation, use, and removal of the case, the following precautions should be taken:

- **Preparing the device:** Before installation, it is recommended to turn off the device to avoid accidental operations on the touchscreen.
- **Fitting:** When putting on the case, check that it does not cover the speakers, microphone, and functional buttons (including the Digital Crown). All cutouts should be precisely fitted.
- **Charging:** Ensure that the case does not block the charging port or interfere with the wireless charging process.
- **Removal:** Avoid forcibly taking the watch out of the case to prevent damaging the device itself or the protective accessory.
- **Product condition:** Do not use a damaged case as it may no longer provide the appropriate level of protection.
- **Ventilation and temperature:** Ensure that the case does not cover critical structural elements of the watch, which could lead to overheating.
- **Contact with chemicals:** Avoid contact of the case with chemical substances such as solvents or oils that may permanently damage the plastic.
- **Comprehensive protection:** In the case of intensive use, it is advisable to combine the case with a

protective film or hybrid glass to provide better screen protection for the watch.

- **Model selection:** Only use cases that are precisely matched to the specific model and size of your Apple Watch.
